Application/Control Number: 10/803,850 Page 2

Art Unit: 2817

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the differential detection embodiment of claims 48,57 and 62 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

<sup>(</sup>b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/803,850

Art Unit: 2817

Claims 39,40,46,47,49 and 59 are rejected under 35 U.S.C. 102(b) as being anticipated by Giebel.

Refer to fig. 2 of Giebel. An amplifier having a plurality of stages 16,18,20 connected in series to form a signal path has an input 12 and output 14. A power detector circuit consisting of diodes D1,D2, amplifier 30, etc. is used to control the gain based on the signals detected including that between amplifiers 18 and 20 which may be read as the interior node claimed and meets the limitations of the sampling location defined in claim 40. The output Vg of amp 30 may be read as the first signal of claims 39 and 59 and the bias signal of claims 46 and 59 as it will bias an FET 42 at the first stage to set the gain thereof. Regarding claim 47, the detected signals appear to be summed at the node connecting diodes D1 & D2. In re claim 49, the insertion of a reference signal Vref into the path of one detection signal should result in the weighting of that signal relative to the other.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was

not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 42-45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Giebel in view of Aihara (cited by applicant).

The difference added by these claims and Giebel is the matching circuits claimed.

Aihara discloses the use of input, intermediate and output matching circuits in a cascaded amplifier arrangement and it would have been obvious to utilize such circuits in Giebel in order to provide impedance matching for more efficient signal transfer.

Claims 41,48 and 60-62 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 50-58 are allowed. The detector circuit of Giebel does not sample at two interior nodes as required by these claims except claim 48, which requires a differential detection circuit also not disclosed.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Note the arrangement of fig. 1 of Kumar where the signal at an interior node is used to bias the next stage. Note the matching circuits in fig. 2.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven J. Mottola whose telephone number is 571-272-1766. The examiner can normally be reached on M-Th from 8 to 5.

Application/Control Number: 10/803,850 Page 5

Art Unit: 2817

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert J. Pascal, can be reached on 571-272-1769. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
